

Suffering from
Osteoarthritis?

Introducing

TENDORIGHT FORTE

DORPHYLL[®]
HEALTHCARE

BUILDS & MAINTAINS Strong & Healthy Bones

PROMOTES BONE Health

SUPPORTS BONE Mineral Density

RECOMMENDED in Advanced Tendinopathies

Chondroitin Sulfate

- Is widely used as a dietary supplement for treatment of osteoarthritis
- Is also used to treat patients with joint pain, and signs of “wear and tear” due to aging

Collagen Peptide

- Plays an important role in preventing and treating Osteoarthritis, because loss of collagen leads to Cartilage damage
- Has a protective effect on articular cartilage, primarily helping in symptomatic relief of pain

L-arginine

- Gets converted in the body into a chemical called nitric oxide; the known biological activities of nitric oxide suggest a role in bone healing
- Can also be conveniently used in the treatment of osteoporosis in the peri and post menopausal osteoporotic females

Sodium hyaluronate

- Helps in reducing inflammation associated with Osteoarthritis
- Effective in acute and chronic, (reducing and non-reducing) disk displacement, and degenerative joint disease

Vitamin C

- Is an antioxidant and anti-inflammatory nutrient
- Aids in fracture healing and normal bone development
